

Dec 4, 2020

Dear Prof S Sadagopan,

I am reaching out on behalf of Limestone Analytics, which is conducting the final evaluation of the [Digital Impact Alliance's \(DIAL\)](#) 1.0 strategy. As you may know, DIAL is a multi-donor funded program that advances digital inclusion to achieve the SDGs. They are currently working with several governments in Africa to support their digital transformation. We'd like to speak with you regarding your perspective on the role of donor support in advancing open source solutions for Digital Public Goods, especially those that serve the basis for government services. Given the work of MOSIP.io in platform for national foundational IDs, your perspective would be greatly appreciated.

Are you available to speak over the next week? I am based in Vancouver, BC - it looks like there are a few windows for a call at either 8:30am or 9:30am India Time. Please let me know if you are available at any times.

Given the large number of interviews are conducting, we would like to record the interview with you to help with the synthesis of results. The recording will be stored securely within Limestone's Google suite. Please let us know if you are comfortable being recorded or if you would prefer not to be recorded.

Kind regards,  
Mark
